Reasons for Allowance

2. Although Williams, U.S. Patent Application Publication No. 2004/0105536 (hereinafter Williams) discloses a telecommunications network (see Figure 1) including at least one service control point (see SCP from paragraph 0031) and a plurality of interconnected service switching points (see units 20a-d from Figure 1), in which said service control point is arranged in use to respond to signals received from a gateway to another network (see unit 38 from Figure 1) to cause a call (see Figure 5) to be set up between two or more termination points of the telecommunications network, in which the service control point is arranged in use to send a message including a first instruction to one of the service switching points to cause a connection (see Figure 4) to a first of said two or more termination points, Williams does not disclose that the service control point is arranged in use to send a second instruction embedded in the message to the same service switching point, in which the second instruction is arranged to force the service switching point to respond with a message to the service control point with an identity assigned by the service control point to

Art Unit: 2614

the action requested in the first instruction in which the service control point is arranged in use to receive further instruction signals from the gateway prior to receipt by the service control point of an event message from the service switching point in which the service control point is arranged, in use, to use the further instructions signals to send a modifying instruction message to the service switching point. For this reason, claims 10 and 19 are allowed.
